Visual Analytics of Netflix Movies and TV Shows Using Tableau

Presented by keerthana Gandla

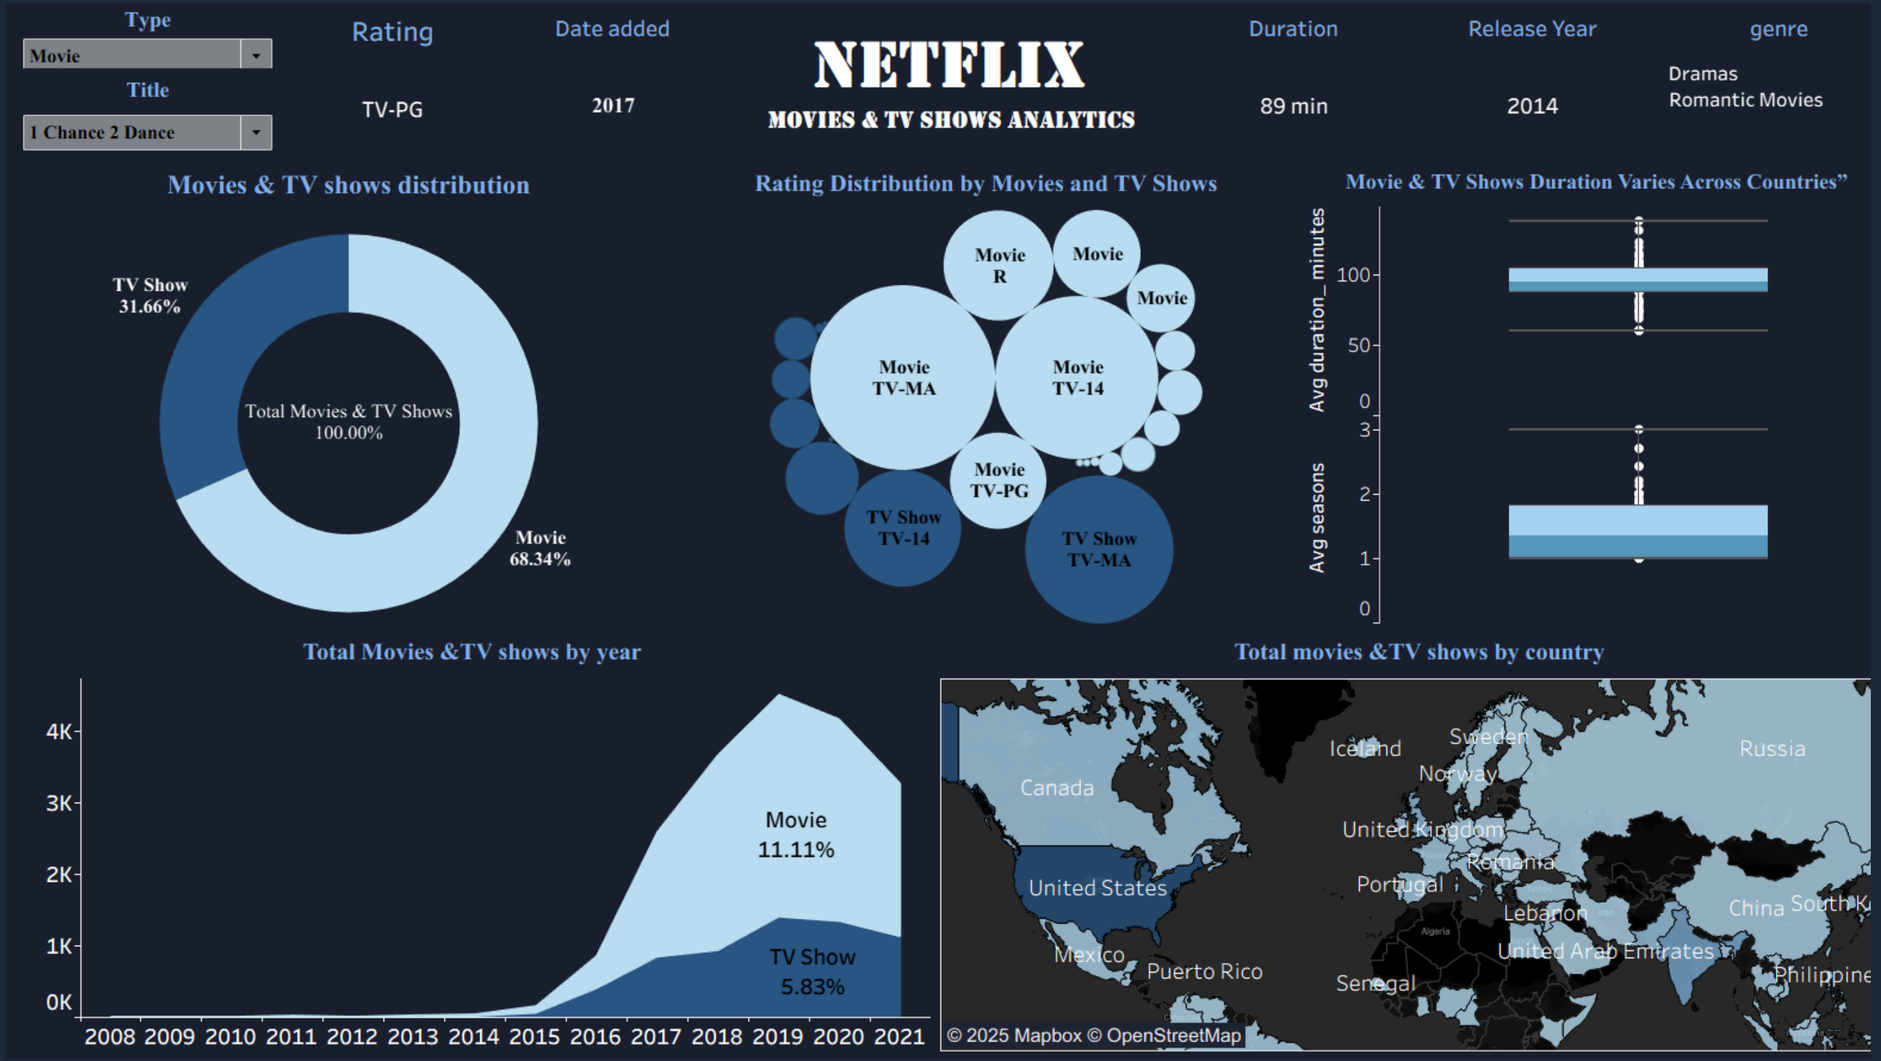
INTRODUCTION

- Project analyzes Netflix Movies & TV Shows using Tableau
- Dataset includes 8,807 titles from multiple decades
- Goal: Explore trends in genres, ratings, release years, durations, and countries
- Two interactive dashboards created for overview and deep insights
- Focus on understanding Netflix's global content patterns

DATA OVERVIEW

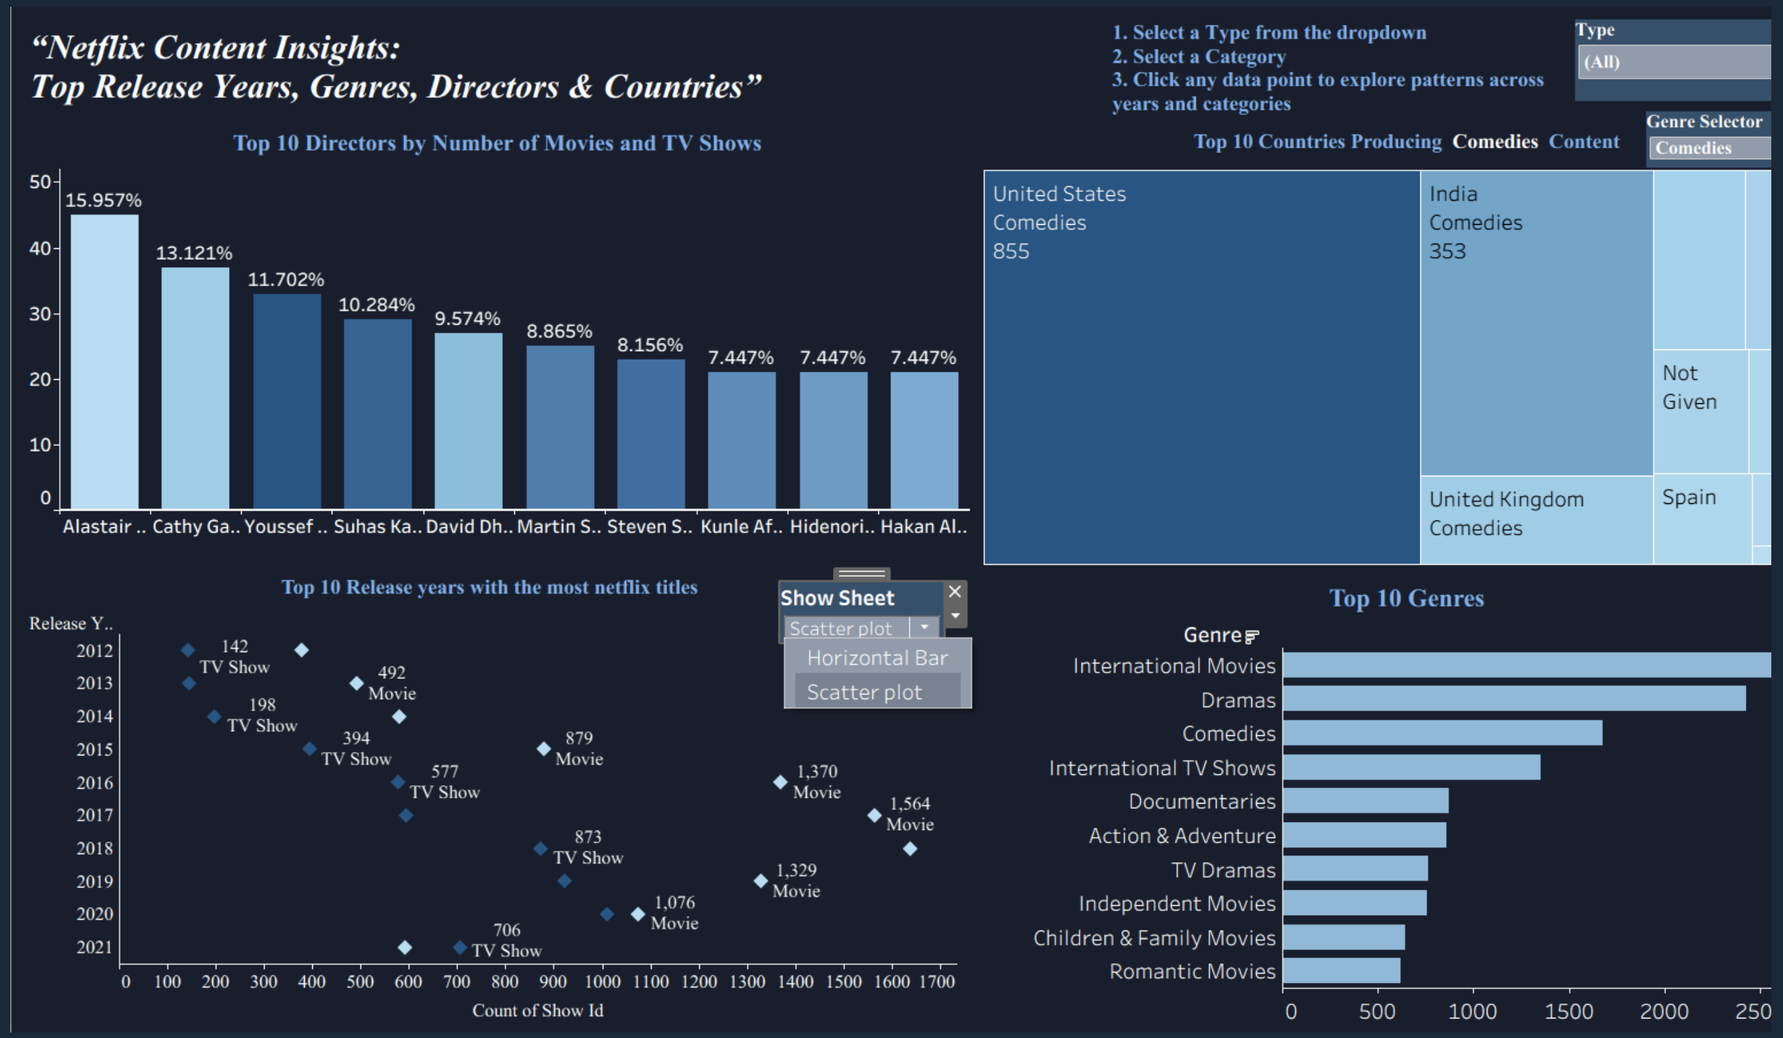
- Contains 8,807 records across Movies and TV Shows
- 12 key fields: type, title, director, country, rating, duration, genre, release year
- Covers content from 100+ countries
- Genre and country fields contain multi-valued entries
- Duration stored as minutes (movies) or seasons (TV shows)
- Missing values replaced with "Unknown"
- Cast column removed to avoid unnecessary complexity

DASHBOARD 1: NETFLIX MOVIES & TV SHOWS OVERVIEW



- Shows overall distribution of Movies and TV Shows
- Displays top ratings across both categories
- Compares movie duration and TV show seasons across countries
- Shows yearly trend of titles added
- Highlights global content production with a world map
- Includes dynamic filters for Type and Title selection

DASHBOARD 2 – NETFLIX CONTENT INSIGHTS



- Provides deeper insights into Netflix's content trends across directors, countries, genres, and release years.
- Top Directors bar chart highlights creators with the highest number of titles.
- Treemap shows top countries producing a selected genre using the Genre Selector parameter.
- Dynamic Layer Visualization: Users can switch between Horizontal Bar and Scatter Plot for Top Release Years using the Show Sheet parameter.
- Top Release Years chart identifies the periods with the highest content additions for Movies and TV Shows.
- Genre ranking bar chart shows dominant categories like International Movies, Dramas, and Comedies.
- Includes interactive filters (Type, Category, Genre Selector) to refresh all visuals dynamically.

CONCLUSION

“Overall, this project clearly shows how Netflix has expanded its content library globally. Movies dominate the platform, mature ratings are most common, and countries like the U.S. and India lead in production. Using interactive filters and dynamic visuals, the dashboards highlight key trends in genres, directors, release years, and country contributions. Together, the insights give a strong understanding of Netflix’s content ecosystem.”
